**Possible Solution**

David took the following gummy bears out of a candy bag and counted how many there were. How many gummy bears were taken out of the candy bag?

David's friend, Gary, counted the gummy bears to shown below to check David's counting.

1. David counted 12 gummy bears that were taken out of the candy bag. David's friend, Gary also counted 12 gummy bears.

2. Tell how the sets of bears are alike and how they are different.

      The bears are alike because both groups have the same quantity or amount of gummy bears. Both groups have the same number of colors of gummy bears.

      The bears are in different because one group is spread out in a line and the other group is in a circle.
