

## Possible Solutions

Look at the cereal box, cereal bowl, and the spoon shown below to answer the following questions.

1. What would you be measuring if you measured the cereal box?

We could measure how tall the box is. We could open it and pour it out to see how much cereal the box will hold. We could weigh it to see how heavy it is.

2. Which is shorter, the box or the bowl?

The box is taller than the bowl, so the bowl is shorter.

3. Which holds more, the box or the bowl?

The box is bigger than the bowl, so it holds more.

4. Which is heavier, the spoon or the bowl?

The spoon is smaller. The bowl would be heavier than the spoon.
