

## Possible Solutions

Debbie has been saving pennies.

a) Show how Debbie can count the pennies by twos to see how many she has.

b) Show how Debbie can count the pennies by fives.

c) Show how Debbie can count the pennies by tens.

d) Does Debbie always get the same amount? Which way do you like the best? Why?

Debbie has 40 pennies. She gets the same amount every time. I like counting by tens better because it is easy to count piles of ten. Then just count the number of piles by ten. It is faster for me.
