

Possible Solutions

Write an expression that matches the groups of cookies in each in each plate. If the plates have the same amount, write the equal sign between the expressions.

$$\boxed{5} + \boxed{4} = \boxed{6} + \boxed{3}$$

This number sentence is true because there are 9 cookies on each plate. I added $5 + 4$ which has a sum of 9 and then I added $6 + 3$ which has a sum of 9 so both expressions are equal.
