**Possible Solutions**

a) David is reading a really exciting book. He is on page 98. If he reads 10 pages every day, on what page will he be in 3 days? Draw a picture and explain your thinking.

I started at 98 and jumped +10 three times.
98 +10 + 10 + 10 = 128
David will be on page 128 in 3 days.

b) There were 815 jars of baby food stacked at the grocery store. Someone ran into the stack with their cart and some of the jars fell off the stack. There are 715 jars left in the stack. How many jars fell on the floor? Draw a picture and explain your thinking.

815	
715	?

815 jars – 715 jars = ?
I know that 715 is 100 less than 815 so I know that 100 jars fell off the stack.
