One-step problems involve solving a problem using one operation. In second grade, this means either using addition or subtraction.

There are 15 stickers on the page. Ben put more stickers on the page. Now there are 22 stickers on the page. How many stickers did Ben put on the page?

15 + ___ = 22

or it's related fact

22 – 15 = ___

15	?

22
