

### 3.2D Possible Solution

(A)  $56,434 > 56,424$

It might help to look at the numbers arranged vertically in a place value chart in order to correctly identify the difference between them.

Hundred-thousands	Ten-thousands	Thousands	Hundreds	Tens	Ones
	5	6,	4	3	4
	5	6,	4	2	4

In this case, only the digit in the tens place is different. Since 3 tens is greater than 2 tens, then 56,434 is greater than 56,424. Therefore, we choose to use the greater than symbol,  $>$ , since the lesser number is listed after the greater number.
