

Possible Solutions

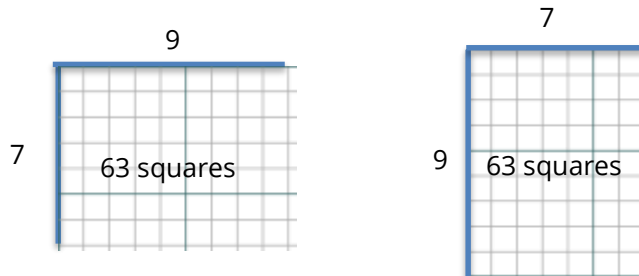

- a) What 3 other equations are in the same fact family as $7 \times 9 = 63$?

The other facts in this family for $7 \times 9 = 63$ are:

$$9 \times 7 = 63$$

$$63 \div 7 = 9$$

$$63 \div 9 = 7$$

- b) Explain how we can use multiplication to find the quotient of 45 divided by 9.

Since multiplication and division are related operations, I can find the quotient by asking myself, "What times 9 is 45?"
