Hint

- On one number line, start at 317 and add 129 using numbers that make sense (perhaps add 100 first, then 20, then 9).
- On another number line, start with the sum from the first line and take away 84, again using numbers that make sense (perhaps 80 and 4).
- Write one equation for the addition part of the problem (the first number line) and another equation for the subtraction part (the second number line).
