## Possible Solutions

When rounding 0.295 to the nearest hundredth, find the closest value in the hundredths to 0.295 (either 0.29 or 0.30).

If the number is exactly halfway between two numbers in the thousandths, the rule is to round to the greater number.

0.295 is exactly halfway between 0.29 and 0.30. Therefore, it would round to 0.30.
