Possible Solutions

During a recent shopping trip, Erin bought six shirts that cost $15.95 each. How much change did Erin receive if she paid with a $100 bill?

Solution 1

6 x 15.95 = 95.70

100 – 95.70 = 4.30

Erin will receive $4.30 back.

Solution 2

```
15.95                    100.00
      15.95          -    95.70
      15.95                4.30
      15.95
      15.95
  +   15.95
      95.70
```

Erin will receive $4.30 back.
